CONSTRAINTS PLAN

File: \\uk.wspgroup.com\Central Data\Projects\700632xx\70063212 - North Walsham Link Road\03 WIP\TP Transport Planning\03 Drawings\GIS\MXD\Constraints\_plan.mxd  
Date Modified: 21/10/2020  
Drawn By: UK1XC600

### Key

- Indicative alignment of proposed link road (Option 4)
- 250m buffer area
- 500m buffer area
- 1,000m buffer area
- Area of Interest

### Constraints

- Listed building, Grade I
- Listed building, Grade II\*
- Listed building, Grade II
- Veteran tree
- HP main
- Bridleway
- Footpath
- Main rivers
- Tree preservation order
- Scheduled monument
- County wildlife site
- Flood Zone 3
- Flood Zone 2
- Local nature reserve
- Site of Special Scientific Interest

PROJECT:  
**NORTH WALSHAM LINK ROAD**

<b>CHECKED:</b>	UKIXG600	<b>APPROVED:</b>	

## SATURN MODEL UPDATE

The Norwich Area Transport Strategy (NATS) SATURN model can be used to assess the traffic impact of highway schemes in the area of Norwich. This model also covers the area of North Walsham but without much detail, which makes it not suitable for testing the traffic impact of the proposed link road. However, with the existing data it is possible to recalibrate the model to be able to estimate the through traffic in the town and therefore the impact of the proposed link road.

### Prior Matrix Development Process

The Mobile Network Data (MND) dataset has been procured from Telefonica for the purposes of updating the NATS model, which has been used and adjusted for this assessment. The NATS model has been updated to include the some of the main A and B roads of North Walsham.

The MND is provided by the operator as three travel modes, comprised of road (bus / car / LGV), rail, and HGV, which then requires reformatting to allow use in the transport model. The MND is also combined with a synthetic matrix (generated from National Trip End Model data) to fill in some of the missing short trip elements as part of the matrix development process.

To begin with the raw data was converted from the MND zone system to replicate the NATS model zone system. Bus users were then separated from the MND road mode and the remaining car and LGV person trips were converted to vehicle trips by utilising WebTAG proportions. Following this, LGVs were split out from car trips utilising Teletrac, NTEM, and ATC information, in order to produce Employers Business purposes. The car trip matrices have then been combined with the synthetic car trip matrices, to infill short distance trips which are otherwise missing from MND.

A rail distribution process has then been carried out on the MND Rail mode, to generate access trips to the rail network, and move the car-based access trips into the highway matrix. It was then necessary to merge the car purposes so that they represent the final highway purposes. Lastly, the MND HGV mode has been converted into PCUs and the car, LGV and HGV matrices have been merged into a single stacked matrix for the highway model.

This process amended the matrix generation process to disaggregate the model zones into those required for this assessment, where the zones covering and surrounding North Walsham were split up from 3 zones to 12 zones, with the zone splits broadly following the workplace zone boundaries from Census 2011. This disaggregation process was applied to the matrix on the same basis as the Norwich Western Link disaggregation, where Census 2011 data on adults, employed people, and workplace populations were used depending on the purpose of the trip.

## TECHNICAL NOTE 3

<b>DATE:</b>	04 September 2020	<b>CONFIDENTIALITY:</b>	Confidential
<b>SUBJECT:</b>	North Walsham WLR - NATS LMVR		
<b>PROJECT:</b>	70063212	<b>AUTHOR:</b>	UKMAH004 UKDID001
<b>CHECKED:</b>	UKIXG600	<b>APPROVED:</b>	

### Network update

The highway network was provided by updating and adding additional detail to an existing 2019 NATS SATURN model. The town of North Walsham has very limited detail in the existing model and only consisted of buffer network and the trip matrix zones that represented the local area loaded the traffic onto a single point. The coarse nature of the network did not allow for an appropriate representation of the network along the A149.

The highway network layout is shown in the figure below:

#### INSERT FIGURE OF NETWORK

Additional detail has been added to the network to represent the critical routes into and within North Walsham. The network now includes the following routes:

- B1145 – North towards Swafield;
- B1145 Aylsham Road;
- New Road and Happisburgh Road;
- Bacton Road;
- B1150; and
- Station Road.

The model calibration will focus upon the junction turning movements at the two signal junctions on the A149 within North Walsham:

- Cromer Road/A149 signal junction; and
- A149/Norwich Road.

These junctions were modelled in detail with the following attributes:

- Signal Timings;
- Link speeds (cruise speeds and speed flow curves);
- Link and junction saturation flows;
- Link distances;
- Give-way priority and flare length markers; and
- Number of lanes.

The saturation flows (PCUs) used for this model were:

- 1,900 per lane – straight ahead
- 1,850 per lane – turning lane

The trip matrix was disaggregated to provide greater detail of the urban area and to allow the trips to be loaded into the model more realistically and to enable model calibration validation to be undertaken much more easily.

The trip matrix was assigned to the network and route calibration checks were undertaken to ensure that routing within the model was realistic. Sense checks were made so that trips travelling to/from the town

# TECHNICAL NOTE 3

centre towards the A149 and other key routes inbound and outbound of the town were using the appropriate link and junctions. Alterations were made to link speeds, distances, signal timings where needed to improve the network. The junction turn counts at the two key junctions were used as a reference base when making these alterations. Once the network was deemed to provide the enough level of detail then model calibration and validation was undertaken.

## Model Calibration and Validation

The model has been validated and calibrated with existing traffic survey data (shown in Table 0-1) from previous years that was uplifted to 2019 and deemed sufficient to produce a high-level estimation of the through traffic in the town, as it can be seen in Table 0-2.

**Table 0-1 - MCC and ATC survey locations for calibration/validation**

Type	Date	Location
ATC	19/01/17 – 25/01/17	A149 Cromer Road
ATC	28/06/14 – 04/07/14	Norwich Road
MCC	26/11/14	A149 Cromer Road / A149 / B1145
MCC	26/11/14	A149 / Norwich Road

## Through Traffic Assessment

Once the model was calibrated and validated, cordon matrices from the NATS model for the study area have been extracted for the AM and PM period for the five user classes present in the model to quantify the traffic within North Walsham.

Changes to the zone system and user classes (UCs) were made to the cordon matrices to match the zones devised for this study. The matrices were combined into AM and PM one-hour matrices describing Lights as (UC1,2,3,4), with Cars and LGVs able to use the same routing, and HGVs (UC5).

# Appendix C

TRIP RATES

Calculation Reference: AUDIT-100314-200514-0502

## TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT  
 Category : B - BUSINESS PARK  
 VEHICLES

Selected regions and areas:

02	SOUTH EAST	
	EX ESSEX	2 days
	WG WOKINGHAM	1 days
04	EAST ANGLIA	
	CA CAMBRIDGESHIRE	2 days

*This section displays the number of survey days per TRICS® sub-region in the selected set*

## Primary Filtering selection:

*This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.*

Parameter: Gross floor area  
 Actual Range: 2900 to 142687 (units: sqm)  
 Range Selected by User: 2480 to 142687 (units: sqm)

Parking Spaces Range: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/12 to 18/05/18

*This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.*

Selected survey days:

Wednesday	1 days
Friday	4 days

*This data displays the number of selected surveys by day of the week.*

Selected survey types:

Manual count	5 days
Directional ATC Count	0 days

*This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.*

Selected Locations:

Edge of Town	5
--------------	---

*This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.*

Selected Location Sub Categories:

Industrial Zone	2
Commercial Zone	1
Development Zone	1
No Sub Category	1

*This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.*

## Secondary Filtering selection:

Use Class:

B1	5 days
----	--------

*This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.*

## Secondary Filtering selection (Cont.):

Population within 1 mile:

5,001 to 10,000	1 days
10,001 to 15,000	3 days
20,001 to 25,000	1 days

*This data displays the number of selected surveys within stated 1-mile radii of population.*

Population within 5 miles:

125,001 to 250,000	4 days
250,001 to 500,000	1 days

*This data displays the number of selected surveys within stated 5-mile radii of population.*

Car ownership within 5 miles:

0.6 to 1.0	1 days
1.1 to 1.5	4 days

*This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.*

Travel Plan:

Yes	1 days
No	4 days

*This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.*

PTAL Rating:

No PTAL Present	5 days
-----------------	--------

*This data displays the number of selected surveys with PTAL Ratings.*

<b>Total Rates:</b>			<b>2.562</b>			<b>2.521</b>			<b>5.083</b>

*This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.*

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.*

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Any resulting copy must retain all copyrights and other proprietary notices, and any disclaimer contained thereon.

The Company accepts no responsibility for loss which may arise from reliance on data contained in the TRICS Database. [No warranty of any kind, express or implied, is made as to the data contained in the TRICS Database.]

#### Parameter summary

Trip rate parameter range selected:	2900 - 142687 (units: sqm)
Survey date date range:	01/01/12 - 18/05/18
Number of weekdays (Monday-Friday):	5
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

*This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.*

23:30 - 24:00									
<b>Total Rates:</b>			<b>0.026</b>			<b>0.026</b>			<b>0.052</b>

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

## TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT  
 Category : B - BUSINESS PARK  
 VEHICLES

Selected regions and areas:

02	SOUTH EAST	
	EX ESSEX	2 days
	WG WOKINGHAM	1 days
04	EAST ANGLIA	
	CA CAMBRIDGESHIRE	2 days

*This section displays the number of survey days per TRICS® sub-region in the selected set*

## Primary Filtering selection:

*This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.*

Parameter: Gross floor area  
 Actual Range: 2900 to 142687 (units: sqm)  
 Range Selected by User: 2480 to 142687 (units: sqm)

Parking Spaces Range: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/12 to 18/05/18

*This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.*

Selected survey days:

Wednesday	1 days
Friday	4 days

*This data displays the number of selected surveys by day of the week.*

Selected survey types:

Manual count	5 days
Directional ATC Count	0 days

*This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.*

Selected Locations:

Edge of Town	5
--------------	---

*This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.*

Selected Location Sub Categories:

Industrial Zone	2
Commercial Zone	1
Development Zone	1
No Sub Category	1

*This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.*

## Secondary Filtering selection:

Use Class:

B1	5 days
----	--------

*This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.*

## Secondary Filtering selection (Cont.):

Population within 1 mile:

5,001 to 10,000	1 days
10,001 to 15,000	3 days
20,001 to 25,000	1 days

*This data displays the number of selected surveys within stated 1-mile radii of population.*

Population within 5 miles:

125,001 to 250,000	4 days
250,001 to 500,000	1 days

*This data displays the number of selected surveys within stated 5-mile radii of population.*

Car ownership within 5 miles:

0.6 to 1.0	1 days
1.1 to 1.5	4 days

*This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.*

Travel Plan:

Yes	1 days
No	4 days

*This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.*

PTAL Rating:

No PTAL Present	5 days
-----------------	--------

*This data displays the number of selected surveys with PTAL Ratings.*

#### Parameter summary

Trip rate parameter range selected:	2900 - 142687 (units: sqm)
Survey date date range:	01/01/12 - 18/05/18
Number of weekdays (Monday-Friday):	5
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

*This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.*

23:30 - 24:00									
<b>Total Rates:</b>			<b>0.026</b>			<b>0.026</b>			<b>0.052</b>

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

LINK ROAD ALIGNMENT 1A

LINK ROAD ALIGNMENT 1B

DO NOT SCALE

- KEY
- PROPOSED EDGE OF CARRIAGEWAY
  - PROPOSED ROAD MARKINGS
  - TACTILE PAVING
  - PROPOSED SHARED USE PATH
  - - - AREA OF INTEREST

- NOTES
1. THIS GENERAL ARRANGEMENT IS NOT TO BE USED FOR CONSTRUCTION. IT IS A COMPOSITE DRAWING SHOWING THE SPATIAL RELATIONSHIP BETWEEN THE PROPOSED AND EXISTING FEATURES.
  2. THIS DRAWING SHOULD BE READ IN CONJUNCTION WITH THE NORTH WALSHAM LINK ROAD FEASIBILITY STUDY (AUGUST 2020), PRODUCED BY WSP.
  3. DIMENSIONS SHALL NOT BE SCALED FROM THIS DRAWING. ALL DIMENSIONS SHOWN ARE IN METRES.

UNTIL TECHNICAL APPROVAL HAS BEEN OBTAINED FROM THE RELEVANT LOCAL AUTHORITIES OR STATUTORY BODIES, IT SHOULD BE UNDERSTOOD THAT ALL DRAWINGS ARE ISSUED AS PRELIMINARY AND NOT FOR CONSTRUCTION. SHOULD THE CONTRACTOR AND / OR EMPLOYER COMMENCE WORK PRIOR TO APPROVAL BEING GIVEN, IT IS ENTIRELY AT THEIR OWN RISK.

# Appendix G

COST ESTIMATES

# Appendix G.1

WLR COST ESTIMATE

## 2. BASIS OF ESTIMATE

### COST DATA

All rates and prices are based on information from our in-house database

All rates and prices are nett of Contractors Fee/OH & P

All rates and prices have been adjusted to current values using BCIS indices

All costs are exclusive of VAT, Stamp Duty etc.

Where appropriate rates and prices cannot be applied to bespoke items, allowances have been made for indicative purposes only.

Allowances for bespoke items are based on historical project data and would be subject to change upon receipt of supplier quotes (if obtained)

A percentage wastage allowance has been included in the rates and / or quantities where appropriate

### ASSUMPTIONS

#### General

An allowance of 5% per Series total has been made for unscheduled items to cover works not itemised in the Direct Works BoQ.

An allowance of 15% of the Direct Construction Cost has been made for design team fees.

An allowance of 10% of the Direct Construction Cost has been made for project management fees.

It has been assumed that this scheme is to be delivered as a 'stand alone' project.

#### Preliminaries

A percentage allowance for preliminaries has been included at 30% to take into account for traffic management and anticipated reduced productivity as a result of the site conditions i.e. working around pedestrians, working around existing live services etc.

#### Series 200: Site Clearance

It has been assumed that fencing at Junction 3 will be removed and replaced

It is assumed that there is no removal/clearance allowance made for drainage items due to current design phase.

It is assumed that there is no removal/clearance allowance made for traffic signs due to current design phase.

It is assumed that there are no street lights to be removed at this current phase, including the corresponding electrical works.

#### Series 300: Fencing

Fencing assumed to be replacing existing with concrete foundations priced separate to the fencing rate.

#### Series 400: Road Restraint Systems

Assumed no safety barrier required for this project.

#### Series 500: Drainage and Service Ducts

It has been assumed that a drainage run would be required for the carriageway construction with associated gullies.

#### Series 600: Earthworks

It has been assumed that any excavation in fields will be deemed acceptable and existing roads will be unacceptable.

Re-use on site of 50% of site won acceptable material has been allowed for, the remainder will be disposed off site.

#### Series 700: Pavements

Proposed pavement assumed to consist of sub-base, base course, binder course and surface course layers.

Existing carriageway to have areas planed out that will be converted to new carriageway.

#### Series 1100: Kerbs, Footways and Paved Areas

Footpath construction rates based on base, binder and surface course.

Kerbing assumed to run along the edge of the carriageway and edge of roundabout.

#### Series 1200: Traffic Signs and Road Markings

No Traffic signs allowed for as no detail at this stage

Road studs assumed to be required every 8 metres along centre line.

#### Series 1300: Road Lighting Columns and brackets

No allowance has been made for lighting in this estimate, once more detail is known to be added.

---

## EXCLUSIONS

The following are excluded, but should be included within the overall Project Budget, where appropriate Christmas or Bank Holiday working  
VAT, Stamp Duty etc.  
Inflation has been excluded at this stage of the estimate.  
CPO for houses as it is anticipated this will not be required for the scheme  
Land costs.  
Planning and approval charges  
Costs associated with Statutory Fees (e.g. HMRI, Local Authority, etc.) unless confirmed  
Costs associated with taxes and levies  
Costs associated with licences and all associated costs and fees  
Costs associated with changes in legislation and any form of applicable standards  
Costs associated with regard to Drainage Ponds  
Costs associated with invasive species, Japanese knotweed, Himalayan balsam  
Costs associated with protected species such as great crested newts, badgers, bats and nesting birds  
Costs associated with asbestos  
No pedestrian guardrail has been included in the estimate, requirement not known.  
Costs associated with road restraint systems  
Costs associated for Statutory Undertakers works  
Costs associated with 400 Series works.  
Costs associated with street lighting and associated electrical works.

# Appendix G.3

SOUTHERN EXTENSION COST  
ESTIMATE

## 2. BASIS OF ESTIMATE

### COST DATA

All rates and prices are based on information from our in-house database

All rates and prices are nett of Contractors Fee/OH & P

All rates and prices have been adjusted to current values using BCIS indices

All costs are exclusive of VAT, Stamp Duty etc.

Where appropriate rates and prices cannot be applied to bespoke items, allowances have been made for indicative purposes only.

Allowances for bespoke items are based on historical project data and would be subject to change upon receipt of supplier quotes (if obtained)

A percentage wastage allowance has been included in the rates and / or quantities where appropriate

### ASSUMPTIONS

#### General

An allowance of 5% per Series total has been made for unscheduled items to cover works not itemised in the Direct Works BoQ.

An allowance of 15% of the Direct Construction Cost has been made for design team fees.

An allowance of 10% of the Direct Construction Cost has been made for project management fees.

It has been assumed that this scheme is to be delivered as a 'stand alone' project.

#### Preliminaries

A percentage allowance for preliminaries has been included at 30% to take into account for traffic management and anticipated reduced productivity as a result of the site conditions i.e. working around pedestrians, working around existing live services etc.

#### Series 200: Site Clearance

It is assumed that there is no removal/clearance allowance made for drainage items due to current design phase.

It is assumed that there is no removal/clearance allowance made for traffic signs due to current design phase.

It is assumed that there are no street lights to be removed at this current phase, including the corresponding electrical works.

#### Series 400: Road Restraint Systems

Assumed no safety barrier required for this project.

#### Series 500: Drainage and Service Ducts

It has been assumed that a drainage run would be required for the carriageway construction with associated gullies.

#### Series 600: Earthworks

It has been assumed that any excavation in fields will be deemed acceptable and existing roads will be unacceptable.

Re-use on site of 50% of site won acceptable material has been allowed for, the remainder will be disposed off site.

#### Series 700: Pavements

Proposed pavement assumed to consist of sub-base, base course, binder course and surface course layers.

Existing carriageway to have areas planed out that will be converted to new carriageway.

#### Series 1100: Kerbs, Footways and Paved Areas

Footpath construction rates based on base, binder and surface course.

Kerbing assumed to run along the edge of the carriageway and edge of roundabout.

#### Series 1200: Traffic Signs and Road Markings

No Traffic signs allowed for as no detail at this stage

Road studs assumed to be required every 8 metres along centre line.

#### Series 1300: Road Lighting Columns and brackets

No allowance has been made for lighting in this estimate, once more detail is known to be added

---

## EXCLUSIONS

The following are excluded, but should be included within the overall Project Budget, where appropriate Christmas or Bank Holiday working  
VAT, Stamp Duty etc.

Inflation has been excluded at this stage of the estimate.

CPO for houses as it is anticipated this will not be required for the scheme

Land costs.

Planning and approval charges

Costs associated with Statutory Fees (e.g. HMRI, Local Authority, etc.) unless confirmed

Costs associated with taxes and levies

Costs associated with licences and all associated costs and fees

Costs associated with changes in legislation and any form of applicable standards

Costs associated with regard to Drainage Ponds

Costs associated with invasive species, Japanese knotweed, Himalayan balsam

Costs associated with protected species such as great crested newts, badgers, bats and nesting birds

Costs associated with asbestos

No pedestrian guardrail has been included in the estimate, requirement not known.

Costs associated with road restraint systems

Costs associated for Statutory Undertakers works

Costs associated with 300 Series works as fencing requirement unclear.

Costs associated with 400 Series works.

Costs associated with street lighting and associated electrical works.

### ASSUMPTIONS

#### General

An allowance of 5% per Series total has been made for unscheduled items to cover works not itemised in the Direct Works BoQ.

An allowance of 15% of the Direct Construction Cost has been made for design team fees.

An allowance of 10% of the Direct Construction Cost has been made for project management fees.

It has been assumed that this scheme is to be delivered as a 'stand alone' project.

#### Preliminaries

A percentage allowance for preliminaries has been included at 30% to take into account for traffic management and anticipated reduced productivity as a result of the site conditions i.e. working around pedestrians, working around existing live services etc.

#### Series 200: Site Clearance

It is assumed that there is no removal/clearance allowance made for drainage items due to current design phase.

It is assumed that there is no removal/clearance allowance made for traffic signs due to current design phase.

It is assumed that there are no street lights to be removed at this current phase, including the corresponding electrical works.

#### Series 600: Earthworks

It has been assumed that excavated material will be deemed as unacceptable.

Assumed that all excavations will be disposed off site.

#### Series 700: Pavements

A road crossing has been assumed to be required on Station Road.

#### Series 1100: Kerbs, Footways and Paved Areas

Footpath construction rates based on base, binder and surface course.

Edging assumed to run along the edge of the footpath.

#### Series 1300: Road Lighting Columns, Brackets & CCTV Masts

Lighting assumed to be required every 50 metres along either side of the footpath with associated electrical works in the 1400 Series.

#### Series 3000: Landscaping & Ecology

Vegetation clearance along the existing footpath has been included.

---
